FOR IMMEDIATE RELEASE

Novagrade® releases the “Double Gripper”, the world’s most rugged universal digiscoping adapter.

Wilsonville, OR – **May 2018** – After completing extensive field testing with military and law enforcement groups around the world Novagrade® is making its “Double Gripper” Phone Adapter available to the civilian market. Two independent spring systems and an anodized aluminum frame ensures zero chance for misalignment even when subjected to extreme shock and vibration.

The new Double Gripper enables a user to connect their cell phone to any spotting scope, binoculars or microscope to capture still photos and video. The Double Gripper is the only one on the market that allows the user to accept any phone (in or out of its case) in just 5 seconds or less.

Novagrade®’s compression ring technology automatically centers the optics, is lightning fast and eliminates the need for set screws which could damage the eyepiece. The attachment system is so secure it is used on the full line of Novagrade® products, including that for full size tablets. Novagrade® is the choice of military and law enforcement personnel needing rugged, field tested equipment for video surveillance.

“Plastic adapters simply do not hold the phone securely or let you use your own case. Tactical squads need the flexibility to adapt to whatever phone is being used at the time.” Says Doug Porter, CEO of Novagrade®. “Our adapters are made of anodized aluminum and stainless steel here in Oregon and designed to last a lifetime. With our innovative compression ring system you can use the same adapter on anything you own from a tiny microscope eyepiece to your largest spotting scope. It is so secure you can lift your tripod off the ground with it. Guides love the fact that they can readjust the grippers to accept client phones in less than 5 seconds so everyone can take home memorable images.”

Founded in 2012 by a team of engineers and avid outdoors people, Novagrade® is the only company that makes a complete line of through the lens adapters for phones, cameras and tablets. Novagrade® also makes special purpose direct eyepiece projection adapters for backcountry researchers and adventurers.
